

5 p 42

$$1) \quad t = \frac{m_{\text{solute}}}{V}$$

g/L                      L

2) Données:  $m_{\text{solute}} = 7 - 5 = 2 \text{ g}$

$$V = 50,0 \text{ mL} = 50 \times 10^{-3} \text{ L}$$

A.N:  $t = \frac{2}{50 \cdot 10^{-3}} = \underline{40 \text{ g/L}}$
